

UNIT

1

ANIMAL PARTS AND THEIR FUNCTIONS

The eagle is catching fish for food.

What parts of the eagle can you observe?
How do these parts help the eagle catch
the fish?

Let's Find Out:

- What are the functions of different animal parts?
- How do the shapes of animal parts relate to their functions?

What Are the Functions of Different Animal Parts?

There are many different animals living in different places. Different animal parts help the animals in various ways. Let us look at some animal parts and their **functions**.

FLASHBACK

Recall from Textbook 1 Unit 4: Different animals use different body parts such as legs, fins, tail fins and wings to move.

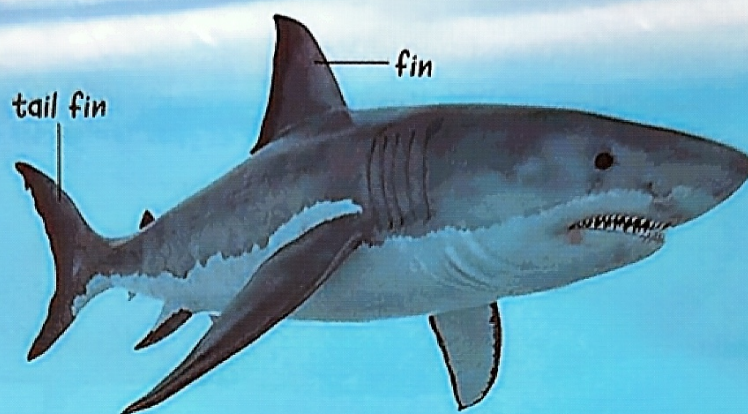

Legs and arms

Most animals that live on land have legs. Some also have arms. These animals use their legs and arms to move.

Fins and tail fins

Fish have fins and tail fins. They use their fins and tail fins to swim.

The shark uses its fins and tail fin to swim.

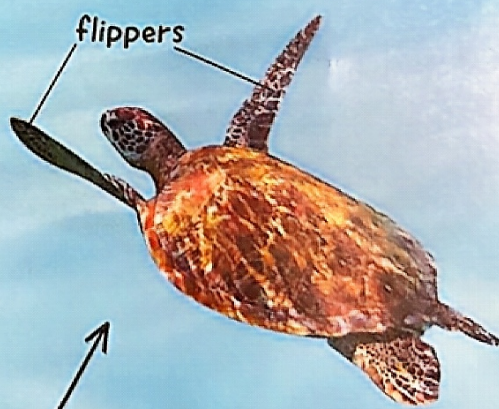

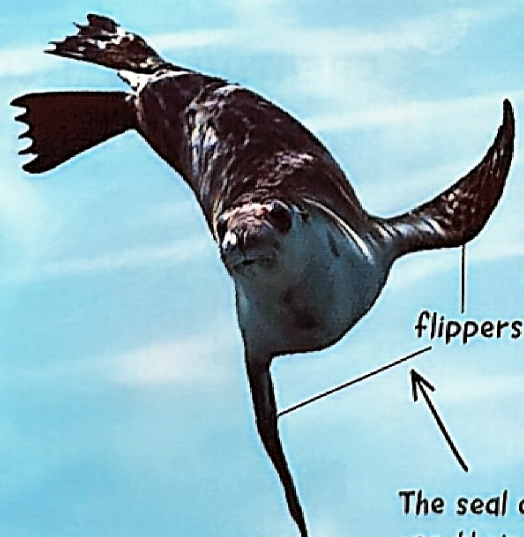

WE CARE

Some people eat shark fins. The fins are cut from the sharks while they are still alive. The sharks are then thrown back into the water. The sharks are unable to swim without their fins and will die. We should save sharks by not eating shark fins.

Flippers

Some animals have flippers. They use their flippers to swim.

The seal and the sea turtle use their flippers to swim.

Wings

Some animals have wings. They use their wings to fly.

Some animals have wings that are similar to flippers. These animals use their wings to swim.

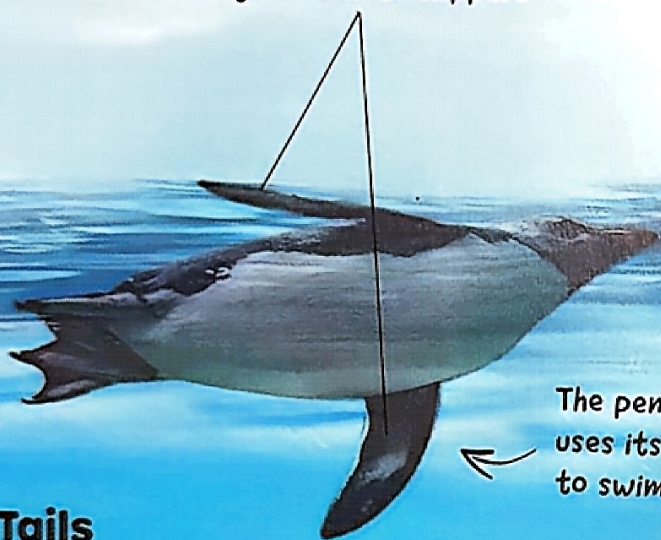

The parrot uses its wings to fly.

How is movement useful to animals?

wings similar to flippers

The penguin uses its wings to swim.

Tails

Many animals have tails. Some of them use their tails to move.

The dolphin uses its tail to swim.

CREATIVE SCIENCE

Make an animal model using a milk carton!

Activity Book

► Creative Science, pages 1-2

Some animals use their tails to hold onto objects.

tail

The monkey uses its tail to hold onto the branch of a tree.

Some animals use their tails to protect themselves against small animals that may bite them.

tail

The zebras swing their tails to drive away insects.

Some animals also use their tails to keep warm.

tail

The Arctic fox wraps its tail around its body to keep warm.

 **Activity Book**
▶ Activity 1, pages 3-4

Mouth parts

Animals have different mouth parts. They use their mouth parts to eat. Some animals have teeth and tongues. Birds have beaks.

Teeth

Some animals use their teeth to chew their food.

The otter uses its teeth to eat fish.

The zebra uses its teeth to chew grass.

Tongues

Some animals use their tongues to obtain food.

The chameleon uses its tongue to catch other animals for food.

The giraffe uses its tongue to grab leaves.

Beaks

Birds do not have teeth. They use their beaks to obtain food and eat.

The parrot uses its beak to eat nuts.

The vulture uses its beak to eat meat.

The pelican uses its beak to catch fish.

Birds also use their beaks to defend themselves, build their nests or feed their young.

The bird uses its beak to feed its young.

QUICK CHECK

1. Name three animal parts that help animals move in water.
2. List three functions of the tails of animals.

1.2

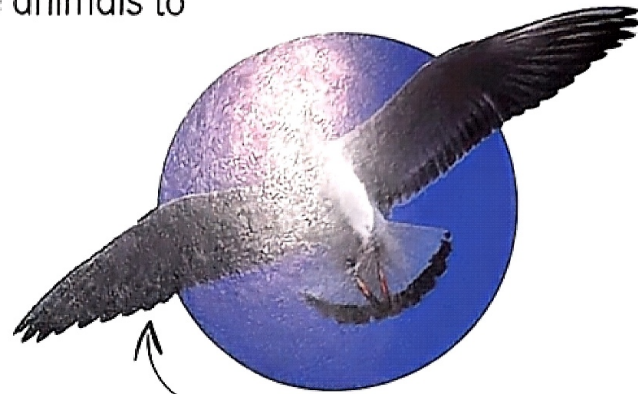

How Do the Shapes of Animal Parts Relate to Their Functions?

Animal parts come in different shapes, which enable them to carry out their different functions.

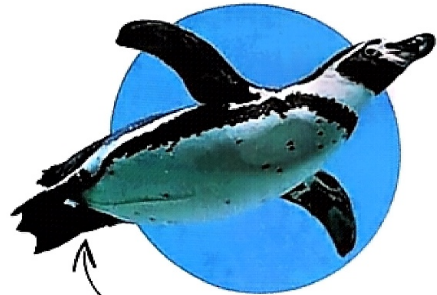

The shapes of these animal parts allow the animals to move **efficiently**.

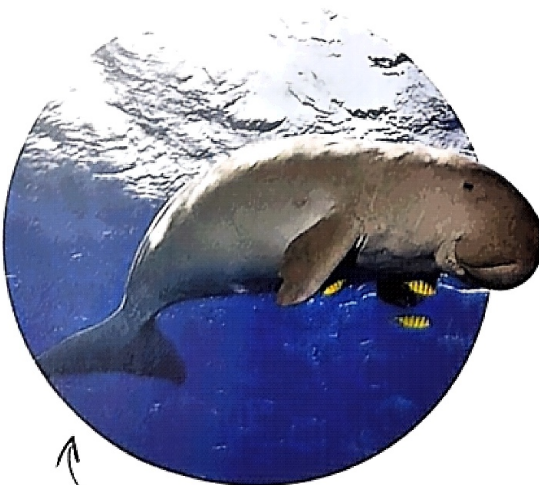

The long arms and legs of a sloth help it climb trees.

The wide wings of a seagull help it fly.

The flipper-like feet of a penguin help it swim.

The broad tail and flippers of a dugong help it swim.

The broad tail fin of a goldfish helps it swim.

The shapes of these animal parts allow the animals to obtain food.

The long tongue of a chameleon helps it catch its food from a distance.

The sharp claws of an eagle help it grab and hold onto its food.

The shape of an animal's teeth depends on the type of food it eats.

Some animals, such as horses and cows, eat only plants. They are called **plant-eaters**.

Some animals, such as tigers and cheetahs, eat only other animals. They are called **animal-eaters**.

Some animals, such as bears and mice, eat both plants and animals. They are called **plant-and-animal eaters**.

The flat teeth of a horse help it chew leaves and grass.

The pointed and sharp teeth of a tiger help it tear meat.

The bear has sharp teeth to tear meat and flat teeth to chew fruit.

EXPLORE

Giraffes have a long neck. How does having a long neck help the giraffe? Discuss with your classmates.

Activity Book
Activity 2, pages 5-6

Some birds eat other animals. Other birds feed on fruit, seeds or the nectar of flowers. The beaks of birds come in different sizes and shapes. This allows the birds to obtain the different types of food they eat.

The hooked beak of a falcon helps it tear meat.

The short, sharp and cone-shaped beak of a sparrow helps it break seeds.

The long and sharp beak of a kingfisher helps it catch fish.

The long and thin beak of a hummingbird helps it obtain nectar from flowers.

RESEARCH

Do you know that some birds have large, colourful beaks? Find out how such beaks help these birds survive.

QUICK CHECK

1. Describe the teeth of a plant-and-animal eater.
2. What is the shape of the beak of a bird that eats other animals?

Activity Book
Activity 3, pages 7-9

What We Have Learnt

Animals

have

**DIFFERENT
PARTS**

such as

that have different

**LEGS AND
ARMS**

**FINS AND
TAIL FINS**

FLIPPERS

WINGS

TAILS

TEETH

TONGUES

BEAKS

SHAPES

which enable them
to carry out their

FUNCTIONS

such as

Moving efficiently

Obtaining food

Test Yourself

1. Which statement about the beaks of birds is correct?

- (1) Birds use their beaks only for obtaining food.
- (2) The beaks of all birds are similar in shape and function.
- (3) Birds that eat other animals have short, cone-shaped beaks.
- (4) Birds have beaks of different sizes and shapes to obtain different types of food.

2. Look at these animals.

Which of the following statements about the tongues of a chameleon and a frog is/are correct?

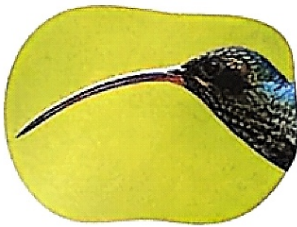

- A They are long.
 - B They are used to chew food.
 - C They help the animals obtain food.
-
- (1) A only
 - (2) C only
 - (3) A and C only
 - (4) B and C only

3. Study this classification table.

Group A	Group B	Group C
Frog	Dolphin	Dove
Kangaroo	Seal	Pigeon

- (a) How are the animals classified?
- (b) Which group should a bat be placed in?

4. Look at the beaks of birds P, Q and R.

P

Q

R

- (a) Which bird eats seeds? Explain your answer.
- (b) Which bird eats other animals? Explain your answer.

 **Activity Book:**
Let's Review, pages 10-12

SCIENCE GLOSSARY

Animal-eater

Living thing that eats only other animals

Efficiently

Working well

Function

Way in which something works

Plant-and-animal eater

Living thing that eats both plants and animals

Plant-eater

Living thing that eats only plants
